## Novra Group Launches Government & Defense Division, Appoints Gary Carter as Vice President

### News Release

**OTTAWA, ON — May 26, 2026** Novra Group [Novra Technologies Inc. (TSXV: NVI) (OTCQB: NVRVF) and its subsidiaries, International Datacasting Corporation and Wegener Communications] today announced the formation of a new dedicated Government & Defense division, reinforcing the group's commitment to serving a growing and strategically important segment of the global communications market.

Reliable communications are essential to the mission-critical networks that governments and defense organizations depend on every day. Novra Group has decades of experience supporting government programs worldwide, spanning applications from morale and broadcast networks to weather monitoring and highly secure data transmission in operational environments.

The company's customer base includes leading organizations such as the U.S. Government's Global Broadcast Service, DISA, NASA, NOAA, the U.S. Space Force, U.S. Air Force, U.S. Army, U.S. Navy, U.S. Marine Corps, NAVAIR, and U.S. Army TV, as well as major contractors and partners including RTX, Lockheed Martin, General Dynamics, Sawtooth, and others. Novra also supports numerous government broadcast radio and television networks around the world.

The new division will align resources and expertise to better support current customers, accelerate innovation, and expand Novra Group's presence in government and defense sectors.

To lead this initiative, Novra Group announced the appointment of Gary Carter as Vice President, Government & Defense. A longtime leader within the company, Carter brings deep experience across both technology and business development. His strong relationships within the sector, familiarity with procurement processes, and grasp of emerging technology requirements position him to lead this interdisciplinary effort.

Novra Group's solutions for this market include IP encapsulators, encryption technologies, and a range of rugged, highly reliable satellite receivers designed for fixed and mobile

deployments across land, sea, and air environments. The company also brings deep expertise in cybersecurity, regulatory compliance, and long-term product sustainment. In addition, Novra Group has a strong track record of custom engineering and R&D for government and defense customers, an area expected to see continued growth.

“This is a step toward our future,” said Rodney Allan, President of Novra Group. “We are leveraging our decades of experience in secure, reliable delivery over satellite and terrestrial networks to play a key role in the next generation of communications.”

“We are proud of the reputation and relationships we have built in this sector,” added Harris Liontas, CEO of Novra Group. “As a Canadian company with manufacturing operations in both Canada and the United States, we are well positioned to expand our product portfolio and deepen our engagement in this important market.”

The announcement coincides with the CANSEC 2026 exhibition in Ottawa. Novra Group, a member of the Canadian Association of Defence and Security Industries (CADSI), will be participating in the event, meeting with customers and partners.

### **About Novra Group**

The Novra Group of Companies, including Novra Technologies, International Datacasting Corporation (IDC), and Wegener Communications, provides advanced technology solutions for multimedia content distribution, management, and control. With a global network of partners and resellers, and a prestigious list of customers worldwide, Novra specializes in satellite, terrestrial, and IP-based delivery platforms for a wide range of applications, including broadcast radio, television, digital signage, data distribution, government and defense, and more.
